

Data Scientists (all levels)

REEF Technology

Qualifications

- MS or PhD in quantitative field (economics, mathematics, statistics, engineering, etc.)
- Experience and/or interest in applying statistics, analytics, and machine learning in real life scenarios. Bonus points for those candidates with project portfolio.
- Programming experience in R and/or Python.
- Good knowledge of relational databases.
- Ability to flying solo as well as partnering well with others to solve problems and actively incorporate input from various sources.
- Able to synthesize quantitative findings into actionable insights and communicate them in a compelling, digestible way to a variety of stakeholders.

Responsibilities

- Develop data science products and solutions that help us achieve our projected growth.
- Derive innovative insights using a wide variety of quantitative methods, including machine learning algorithms.
- Conduct ad hoc analyses to support different teams' efforts.
- Help us to shape the next generation of our products.
- Communicate and show the value of data-informed decision making to a variety of stakeholders, and influence others
